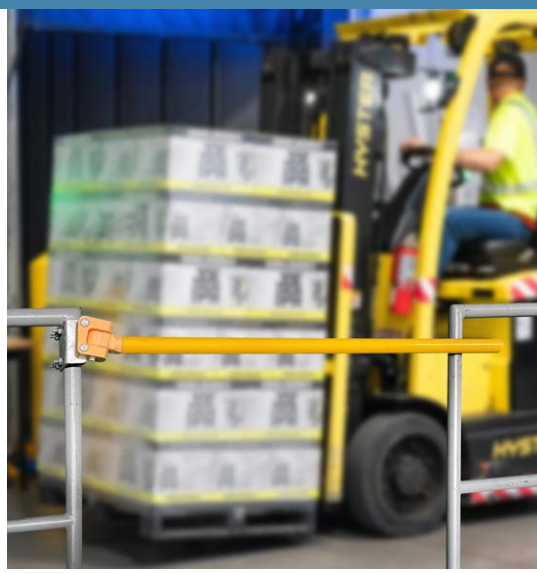
# PEDESTRIAN GATE

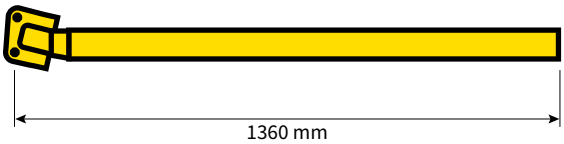


**The self-closing PEDESTRIAN GATE is an easy way to prevent people from inadvertently entering certain areas.**

## When should you use the pedestrian gate?

In certain cases, it is safer to secure walkthroughs in guardrails with a movable gate rather than leave it open. This way, people have to physically open the gate as a reminder that they may enter a potentially hazardous or off-limits area. The gates can even be fitted with a sign to inform people about the area they are entering; like the presence of dangerous goods or gases, moving forklifts or working machinery, or to ask people to perform a certain task.

The pedestrian gate closes off guardrail openings in a simple, effective way.



*The pedestrian gate is available in one size, but can easily be shortened if necessary.*

### Key properties

- Easy installation;
- A simple and effective way to close off certain areas;
- The gate is self-closing, even after years of use;
- Available in one length, but can be shortened to the desired size;
- Can optionally be equipped with a (warning) sign with text or image of your choice.

## Can pedestrian gates replace the Intrepid safety gates?

As the pedestrian gates are single-bar gates that don't offer adequate fall protection, they can **not** replace the double-bar safety gates that do offer fall protection according to the ISO-NEN 14122-3-2016 standard. The pedestrian gates are meant to be used in cases where a simple barrier suffices, without the need to offer the protection of the Intrepid safety gate in more demanding environments.
