OUR STRENGTH IS YOUR SAFETY

GUARD ACCESS OPENINGS

SAFETY GATES

GRAVITY-CLOSING SAFETY GATES: The strongest and most reliable self-closing safety gate, made of a unique polyurethane, to protect people against accidental falls through guardrail openings.

Worldwide success

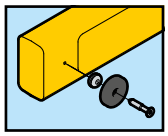
- Proven design successfully used for 40 years;
- The gates guarantee safety for your employees;
- Service life > 30 years.

Why should you use our safety gates?

Since 1980, more than 600.000 gates have been supplied to refineries, chemical plants, paper mills, automotive, offshore, and marine environments. We offer the only TÜV-tested safety gate in the world; that means that the product has been tested for safety and meets all global safety requirements.

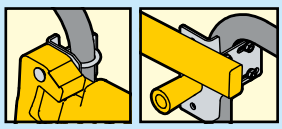
Key properties

- Made of patented polyurethane: much stronger than regular plastics other safety gates are made of;
- Gate automatically closes due to gravity, no human interaction required;
- Sturdy and reliable, even after years of exposure in harsh environments and heavy usage;
- Design does not depend on springs, cams, or bearings;
- Available in four standard sizes;
- Different fastening kits available, to install gates on L-profiles, square-, round- or flat-bars;
- Supplied with HDG hardware (stainless steel 316 on request);
- Maintenance free and lightweight, as opposed to steel gates.

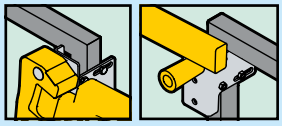


We advise to use a Magnetic Closure Kit (MCK) to hold the safety gate in a closed, unlocked position for additional safety.

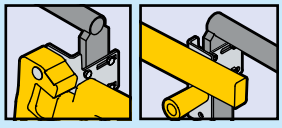
The gates are supplied with fastening materials to attach the gate to angle iron guardrail posts. Installation kits for e.g. round or square tubes, are separately available.



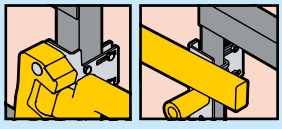
Round Tube Kit (RTK)



Square Tube Kit (STK)



Flat Bar Kit (FBK)



No-drill Angle Profile Kit (APK)
